

Where Healing Begins

THE AMOENA SOLUTION FOR RECOVERY CARE

CURASUPPORT COMPRESSION

Compression garments are developed to stabilise the operated breast during the healing phase. Our compression bras help protect sensitive scar tissue and reduce irritation. This minimises the risk of post-surgical oedema, reduces post-surgical swelling and pain, and supports wound healing.

RECOVERY CARE

NEW
colour

LEYLA ZIP-ST-LOW

- Style no.** 44605 White
 44604 Rose Nude
 44606 Black

Sizes 10/12; 14/16; 18/20; 22/24; 26/28; 30/32

Cups Universal

LOW
PRESSURE LEVEL

FEATURES & BENEFITS

- Leyla can support surgical results for various breast surgeries
- Light compression level assures sufficient immobilisation and stabilisation of the operated breast tissue and optimal healing conditions
- Accurate fitting thanks to seamless technology and universal cups
- Hygienically prepared for direct clinical use through a pre-washing process
- Seamless and gentle fabric on surgical site reduces skin irritation, discomfort and unwanted pressure

SINA HE-ST-MEDIUM

- Style no.** 45007 White
 45006 Rose Nude
 45008 Black

Sizes 10/12; 14/16; 18/20; 22/24; 26/28; 30/32

Cups Universal

MEDIUM
PRESSURE LEVEL

FEATURES & BENEFITS

- Made with seamless circular knitting technology for a precise fit and wearing comfort
- Hygienically prepared for direct clinical use through a pre-washing process
- Immobilisation and stabilisation of the operated breast (special knitted zones on the underside of the cup)
- Special knitted zones and a targeted moderate pressure level support lymphatic drainage and the healing process
- Pre-formed and flexible seamless cups ensure optimal stabilisation of the operated breast with even all-over pressure (no fixation ring around the cup)

PAMELA ZIP-ST-HIGH

- Style no.** 45010 White
 45009 Rose Nude
 45011 Black

Sizes 10/12; 14/16; 18/20; 22/24; 26/28; 30/32

Cups Universal

HIGH
PRESSURE LEVEL

FEATURES & BENEFITS

- Made with seamless circular knitting technology for a precise fit and wearing comfort
- Hygienically prepared for direct clinical use through a pre-washing process
- Immobilisation and stabilisation of the operated breast (special knitted zones on the underside of the cup)
- Special knitted zones and a high pressure level support lymphatic drainage and the healing process
- Pre-formed and flexible seamless cups ensure optimal stabilisation of the operated breast with even all-over pressure (no fixation ring around the cup)
